Europa Announces Drill Hole TOD22 Complete

Event

Europa Metals Ltd ("Europa") has announced that the second hole in the current drilling campaign (TOD-022) at the Company's 100% owned Toral lead, zinc and silver project has successfully reached its target location having been completed at 761.30m (750m original target depth).

Highlights

The key aspects of hole TOD-022 are:

- Target depth of 750m reached with total of 760m reached on hole closure
- Core processed and sent to Assay laboratory for analysis
- First successful orientation of 750m target zone drill hole by Europa Metals

Comment

This is the second hole of the current drilling programme and the first to hit the target, the first going off-course and hitting the orebody some 100m shallower than design.

With the completion of hole TOD-022, Europa has commenced drilling hole TOD-023. (Exhibit 1). This hole is located further to the west of the two previous holes. This will serve three purposes, to act as the metallurgical sample and to see if it replicates hole SJ22, a Peñarroya hole (drilling campaign concluded 1984) that is situated within a cluster of assayed holes. Hole SJ22 intersected approximately 5m of mineralisation and the Europa technical team have studied the historic core itself in addition to the un-assayed logs of the intersection. The third purpose of TOD-023 is to increase the understanding of how the high grade ore shoots behave and what the relationships might be between the structures as they come to surface.

The Toral lead, zinc and silver mineralisation is currently comprised of at least 2, possibly 3, plunging high grade shoots. Higher grade mineralisation is usually identified at 400m from surface at the Toral project with the majority of the currently defined resource present in distinct areas down to 1000m from surface (where the project is open at depth).

The location of Hole TOD23 will contribute to establishing the continuity and extent of the plunging high grade shoots observed in the deposit. It will also be useful when the ore resources are next calculated being in a cluster of six holes, all of which were assayed.
